

Quiz Questions

1. Which of the following is not a physical change?

- (a) Boiling of water to give water vapour
- (b) Melting of ice to give water
- (c) Dissolution of salt in water
- (d) Combustion of liquefied petroleum gas (LPG)

Correct option: (d)

Explanation: During combustion of liquefied petroleum gas (LPG), it forms CO_2 and H_2O .

2. Which one of the following processes involve chemical reactions?

- (a) Storing of oxygen gas under pressure in a gas cylinder
- (b) Liquification of air
- (c) Keeping petrol in a china dish in the open
- (d) Heating copper wire in presence of air at high temperature

Correct option: (d)

Explanation: Chemical changes involve formation of new compounds from one or more substances.

On heating copper wire in presence of air at high temperature copper (II) oxide is formed.

3. In which of the following chemical equations, the abbreviations represent the correct states of the reactants and products involved at reaction temperature?

Correct option: (c) $2H_2(g) + O_2(g) \rightarrow 2H_2O(l)$

Explanation: It is because, the standard state for hydrogen and oxygen is gas and for water is liquid at reaction temperature.

- inlet of slurry,
- digester and
- gas outlet.
